

# PULSELOG

## MICRO SD HEARTBEAT LOG

**pulseLog is intended for recreational and fitness use only.  
if you detect unusual heart rate patterns consult your doctor for professional advice.**

An important part of your fitness program is being neglected with typical heart rate monitors. pulseLog receives the transmission from your 5.3khz heart rate belt or exercise equipment and logs the timing between every beat on a micro SD card, These files can be plotted in a spreadsheet to show exactly how your heart reacts to your workout and to stimulants.
